Arnemo, H.
A remarkable series of cargo liners 27

Björklund, B.
The electric traction equipment on the Stockholm Underground Railway 146

Borgström, G.
The power thyristor..... 67

Brisby, K.
Thyristor static exciters for d.c. machines 78

Charles, G.
Thorough testing of components – a condition for the reliability in service of industrial electronic equipment .. 102

Dahle, O.
Thorough testing of components – a condition for the reliability in service of industrial electronic equipment .. 102

Elmlund, H.
Distance protection for three-phase power-lines 14

Fredrikson, B.
Mains-frequency furnaces of the channel type for the holding of iron 47

Friman, C.-J.
Thyristor static exciters for d.c. machines 78

Gremillet, J.
Automatic handling of railway waggons 127

Hjertberg, P.
The research reactor R2–0 at Studsvik – the first nuclear reactor supplied by Asea 117

Johnsson, S.
The Quintus press – a low-weight high-force press 6

Karlsson, A.
Thyristor static converters for d.c. machine drives 71

Kelen, A.
Better corona protection for high-voltage machines 34

Lagerblad, G.
A new compact geared motor 36

Lanner, V.
Trängslet Power-station 91

Linderholm, S.
Transformer bushings for 750 kV 55

Lundblad, E.
The Quintus press – a low-weight high-force press 6

Mellgren, G.
Transductors for a.c. and d.c. regulation .....

Molin, H.
The new Asea two-speed chain minihoist .....

Molin, Å.
The research reactor R2–0 at Studsvik – the first nuclear reactor supplied by Asea .....

Mårtensson, H.
Thyristor static converters for d.c. machine drives ....

Rydinger, M.
Mains-frequency furnaces of the channel type for the holding of iron .....

Rösel, A.
The new Asea series of small motors .....

Sahlberg, Å.
Overhead cranes for scrapyards .....

Sollergren, B.
The transformers for Trängslet Power-station .....

Sundberg, Y.
Induction heaters used in combination with ring-core transformers .....

Svantesson, E.
Standard converters for induction heating – a new line of development .....
The asynchronous machine as a generator for induction heating .....

Tengstrand, C.
The generators at Parteboda Power-station .....
The generators for Trängslet Power-station .....

Torseke, L.
The transformers in the Asea High-power Laboratory at Ludvika .....

Thulin, S.
The research reactor R2–0 at Studsvik – the first nuclear reactor supplied by Asea .....

Virsberg, L.-G.
Better corona protection for high-voltage machines ....

Wenneberg, W.
Large high-vacuum induction melting furnaces .....

Wenström, J.
Silicon rectifier installation for the Stockvik Works of the Stockholms Superfosfat Fabriks AB .....

LIST OF CONTENTS

Page

earch and testing

orough testing of components – a condition for the ability in service of industrial electronic equipment .. 102
ting site for deck machinery* 174

clear power

w-off tank for the Ågesta reactor* 23
a deliveries in the field of nuclear research*..... 86
e research reactor R2–0 at Studsvik – the first nuclear ctor supplied by Asea 117
e top shield for the Ågesta reactor* 173

ctric machines

e generators at Parteboda Power-station 3
remarkable series of cargo liners 27
ter corona protection for high-voltage machines 34
new compact geared motor 36
yristor static converters for d.c. machine drives 71
yristor static exciters for d.c. machines 78
wer unit for diesel generator sets and stand-by power nts* 88
e generators for Trängslet Power-station 94
e new Asea series of small motors 111
ndard converters for induction heating – a new line development 140
10 MVA mobile motor-generator set* 153
e asynchronous machine as a generator for induction ting 170

nsformers and transductors

e transformers in the Asea High-power Laboratory Ludvika 8
nsformer bushings for 750 kV 55
ctifying transformer with a primary voltage of 70 kV use in a rolling mill* 64
e transformers for Trängslet Power-station 97
uction heaters used in combination with ring-core nsformers 135
nsductors for a.c. and d.c. regulation 165

tifiers

e Channel high-voltage d.c. link inaugurated* 21
w Asea semi-conductor diode* 42
e power thyristor 67
yristor nomenclature 70
yristor static converters for d.c. machine drives 71
yristor static exciters for d.c. machines 78
yristor rectifiers for a telephone exchange* 132
con rectifier installation for the Stockvik Works of Stockholms Superfosfat Fabriks AB 143
con rectifier for feeding a section of the Stockholm derground Railway* 155

pacitors

pacitor banks for phase compensation* 20

tching and control equipment

tance protection for three-phase power-lines 14
e-changing switch for rolling-mill motors* 20

Page

Air-blast circuit-breakers for Três Marías Power-station in Brazil* 22
Switchgear of type VMTC for ships* 22
Rheostatic starters* 23
The protection of switchyard personnel* 43
Remote-control equipment for the Swedish State Railways, Stockholm* 62
Thorough testing of components – a condition for the reliability in service of industrial electronic equipment 102
Asea cable retainers – an ideal aid when wiring* 106
Impulse tester type TUA* 106
Programmer for power-station control* 131
Digital draw meter for paper machines*..... 131
110 kV oil-minimum circuit-breakers supplied to the Irish Republic* 152
Operating contact* 155
Transductors for a.c. and d.c. regulation 165

Traction and marine equipment

Diesel-electric shunting locomotives* 24
A remarkable series of cargo liners 27
The new Asea worm-geared winch with three-speed a.c. motor* 44
Asea supply additional Ra locomotives to the Swedish State Railways* 61
New Swedish electric locomotive* 84
Diesel-electric shunting locomotive* 108
Automatic handling of railway waggons 127
The electric traction equipment on the Stockholm Underground Railway 146

Cranes, hoists and trucks

Overhead cranes for scrapyards 58
Sliding hooks for power supply cables for travelling hoists and overhead cranes* 63
The new Asea two-speed chain minihoist 81
The handling of paper rolls by fork trucks* 107
Automatic handling of railway waggons 127

Electric furnaces

Mains-frequency furnaces of the channel type for the holding of iron 47
Asea furnace built in Australia* 60
Mains-frequency furnace with interchangeable inductor units for the melting of brass* 63
Induction heaters used in combination with ring-core transformers 135
Induction stirrer service in Japan* 156
Large high-vacuum induction melting furnaces 159
The asynchronous machine as a generator for induction heating 170

Electric power plants and networks

The Channel high-voltage d.c. link inaugurated* 21
The protection of switchyard personnel* 43
Power unit for diesel generator sets and stand-by power plants* 88
Trängslet Power-station 91
The generators for Trängslet Power-station 94
The transformers for Trängslet Power-station 97
A 10 MVA mobile motor-generator set* 153

* Published under the heading "News in brief"

Page

Industrial equipment

The Quintus press – a low-weight high-force press .. 6
Gears for a strip mill* 42
Digital draw meter for paper machines* 131
Continuous cold rolling mill with commutator motors* 154

Organisation and staff notices

The inauguration of the new Asea factory at Västerås* 40
Yugoslavian visits to Asea, Västerås* 41
Electrical Engineers Exhibition, London, 1962* .....
The Axel Ax:son Johnson Lecture, 1962* .....
New Asea Sales Director .....
Visit by Japanese delegation* .....
Excursion to Boulogne in conjunction with the 196
CIGRÉ meeting* .....
Visit of Nigerian railway commission to Asea* .....

* Published under the heading "News in brief"
